Hiring Team at Agent DevTools / AI Infrastructure

I am applying for the Agent Platform / DevTools Roles role (NYC / Remote / Platform teams).

My pitch for this role is simple: Built for agent platforms, AI infrastructure, developer tools, model observability, orchestration, and internal-platform roles where developer workflow and trust boundaries matter.

WHY I AM A STRONG FIT:

- Developer workflow instincts from shipped platform work: Designed and shipped a type-safe AI API execution workspace at LBR using oRPC, live introspection, and feedback loops that improved accuracy across three internal APIs.
- Agent access and trust map to my identity background: Rebuilt identity/subscription infrastructure across 10+ products and delivered SAML/OIDC for 150+ firms; agent tools inherit the same questions: who can call what, with which credentials, under which audit surface.
- Hands-on enough to reason below the roadmap: Built TypeScript/WebGL interfaces, Python research pipelines, and AI workflow tooling; I can evaluate SDK/API ergonomics, failure modes, and developer adoption from first principles.

A FEW SHIPPED REFERENCE POINTS:

- Type-safe AI API workspace shipped in production
- Identity/access platform serving billions of monthly requests
- Strong fit for LangSmith-style evals, Datadog-style observability, and MCP/agent governance

Packet (résumé, cover letter, and a 30-second role pitch): welc.ing/r/pkt-f7jfoa

I would welcome the opportunity to discuss how I can contribute quickly, operate with high autonomy, and ship for this team.

Best regards,
Alex Welcing
