Hiring Team at Scientific ML / Materials AI

I am applying for the Scientific ML Product Roles role (NYC / Remote / Research-product teams).

My pitch for this role is simple: Built for scientific AI, materials discovery, research-product, simulation, ML platform, and computational-science roles connecting mathematical work to usable product surfaces.

WHY I AM A STRONG FIT:

- Two surfaces for one scientific system: lupi.live is the R3F/WebGL molecule viewer for inspecting molecular structures and trajectories; lupine.science is the company and mathematical research layer around MLIP benchmarks and phase-change simulation.
- Research-grade work presented as product: Built Python scientific-computing pipelines and TypeScript/WebGL interfaces so technical claims, model behavior, and molecular visualization become inspectable rather than hidden in notebooks.
- Broad enough to connect science, product, and GTM: Across Manatt, LBR, Obsess, and Arkadium I have repeatedly translated complex expert domains into systems with users, revenue, and deployment constraints — the same muscle scientific AI needs to leave the lab.

A FEW SHIPPED REFERENCE POINTS:

- lupi.live: R3F/WebGL molecule viewer live in browser
- lupine.science: mathematical/company research layer for materials-science AI
- MLIP benchmarks, phase-change simulation, Python pipelines, and product-facing visualization

Packet (résumé, cover letter, and a 30-second role pitch): welc.ing/r/pkt-1o1n8sz

I would welcome the opportunity to discuss how I can contribute quickly, operate with high autonomy, and ship for this team.

Best regards,
Alex Welcing
