ALLOY · FOUNDED FORWARD DEPLOYED ENGINEER

Hiring Team at Alloy

I am applying for the Founded Forward Deployed Engineer role (New York City).

My pitch for this role is simple: Identity is my deepest domain: I re-platformed identity and subscription infrastructure serving billions of monthly requests, ran SAML/OIDC SSO for 150+ AmLaw 200 firms, and carry that access-boundary discipline into every product I ship.

WHY I AM A STRONG FIT:

- Identity at billions-scale is my track record: Replaced a legacy identity & subscription system across 10+ products at ALM, serving billions of monthly requests with SOC 2 and strict access boundaries.
- Enterprise deployment with security-conscious buyers: Configured SAML / OIDC SSO for 150+ AmLaw 200 firms — high-trust onboarding where security, legal, and product teams all had to align before value shipped.
- I prototype and ship, not just spec: Built a type-safe AI API execution workspace in TypeScript with live introspection, and my own multi-agent stack end-to-end — I understand the systems I govern.

A FEW SHIPPED REFERENCE POINTS:

- Billions of monthly requests served by identity systems I re-platformed at ALM
- 150+ enterprise SSO / SAML / OIDC deployments with security-conscious buyers
- Unified access model across 10+ products

Packet (résumé, cover letter, and a 30-second role pitch): welc.ing/r/pkt-wwzqzs

I would welcome the opportunity to discuss how I can contribute quickly, operate with high autonomy, and ship for this team.

Best regards,
Alex Welcing
